HackSheet[MASTER]

Author: BERKE1337
Web: https://github.com/berke1337/hacksheet

Terminology

Each command contains a list of flags that indicate the OS requirement: Linux (L), BSD (B), FreeBSD (F), Mac OS (M), UNIX (U), and Windows (W).

General Utility

Useful Powershell Commands

⋆ Download File from Internet

```
W #  Powershell
  $source = "http:www.download.com/file.txt"
  $destination = "c:\temp\file.txt"
  $wc = New-Object System.Net.WebClient
  $wc.DownloadFile($source, $destination)
```

Date and Time

⋆ Set date and time

```
U #  date MMddhhmm[[cc]yy]
W # date
W # time
```

Reconnaissance

Scanning

⋆ Ping sweep of subnet and host range

```
U # nmap -sP 10.0.0.0/24 192.168.0.128-254
```

⋆ List all computers in network

```
W # net view
```

⋆ Scan specific TCP and UDP ports

```
U # nmap -pT:21-25,80,U:5000-6000 target
```

⋆ TCP SYN scan without connecting

```
U # nmap -P0 -sS target
```

⋆ Detect OS

```
U # nmap -O target
U # p0f -s trace.pcap
```

⋆ Grab application banners

```
U # nmap -sV target
U # echo QUIT | nc target 1-1024
```

Wireless

Vulnerability Scanning

Web

⋆ Look for web server vulnerabilities

```
U # nikto -host 10.0.0.1
```

Hardening

Physical

⋆ Check devices

- Hardware keylogger (e.g., USB dongles)
- Rogue WiFi cards

OS & Software

⋆ Check for package repositories

```
L # vi /etc/apt/sources.list (Ubuntu)
L # vi /etc/yum.repos.d/* (RHEL/Fedora)
```

⋆ Run package updates

```
L # yum upgrade package
L # apt-get upgrade package
```

⋆ Update Kernel

```
L # yum update kernel (RHEL/Fedora)
L # apt-cache search linux-image; apt-get
  install linux-image-x.x.x-xx (Debian)
```

⋆ Harden SSHD

```
U fail2ban
U # vi /etc/ssh/sshd_config
  Protocol 2
  AllowUsers root admin webmaster
  AllowGroup sshusers
  PasswordAuthentication no
  HostbasedAuthentication no
  RSAAuthentication yes
  PubkeyAuthentication yes
  PermitEmptyPasswords no
  PermitRootLogin no
  ServerKeyBits 2048
  IgnoreRhosts yes
  RhostsAuthentication no
  RhostsRSAAuthentication no
```

User Management

★ Show account security settings

```
U # passwd -l user
L # chage -l user
W # net accounts
W # net accounts /domain
```

★ View Users

```
W # wmic useraccount list brief
```

★ Look for users with root privileges

```
U # awk -F: '$3 == 0 {print $1}' /etc/passwd
W # net localgroup administratos
```

★ Look for users with empty passwords

```
U # awk -F: '$2 == "" {print $1}' /etc/shadow
```

★ Make passwords expire

```
W # wmic path Win32_UserAccount Set
  PasswordExpires=True
W # wmic path Win32_UserAccount where
  name="username" Set PasswordExpires=True
W # wmic path /Node:remotecomputer
  Win32_UserAccount where name="username"
  Set PasswordExpires=True
L # chage -d 0 username
```

★ Set maximum number of login failures

```
L # faillog -M maxNumber -u username
L # failog -r -u username
W # net accounts /lockoutthreshold:maxNumber
W # net accounts /lockoutduration:numberOfMinutes
```

★ Verify group memberships

```
U # vi /etc/group (admin, sudo, wheel)
```

★ Check `sudo` users

```
U # visudo
```

★ Check crontab users

```
U # for u in $(cut -f1 -d:  /etc/passwd); do
  crontab -u $u -l; done
```

★ Check remote authentication

```
U # vi ~/.rhosts
U # vi ~/.ssh/*
```

★ Change passwords

```
U # pwgen -sy (generate strong passwords)
U # passwd user
W # net user user *
```

File System

★ Secure mount points

```
U # mount -o nodev,noexec,nosuid /dev..  /tmp
```

★ List file attributes

```
L # lsattr /var/log/foo
B # ls -ol /var/log/foo
W # cacls.exe file.txt
```

★ File creation date

```
W # dir /tc /od
U # ls -li /etc | sort -n
```

★ System file checker

```
W # sfc /scannow
```

★ File signature serification

```
W # sigverif
W SIGCHECK
W # sigcheck -e -u -s c:\
```

★ Make files append-only

```
L # chattr +a /var/log/foo
```

Network

★ Show firewall rules

```
L # for t in nat mangle filter raw; do
  iptables -t $t -nL; done
W # netsh firewall show portopening
W # netsh firewall show allowedprogram
W # netsh firewall show config
```

★ Close ports

```
W # netsh advfirewall firewall add rule
  name="BlockAIM"
  protocol=TCP
  dir=out remoteport=4099 action=block
```

★ Shut down SMB vulnerable services

W SECONFIG XP ☑Disable NetBIOS over TCP/IP (all interfaces) ☑Disable SMB over TCP/IP ☑Disable RPC over TCP/IP → Apply → Yes

★ Check DNS resolver

```
U # vi /etc/resolv.conf
```

★ Disable IPv6

```
L # ipv6.disable=1 (add to kernel line)
L # vi /etc/sysctl.conf
  net.ipv6.conf.all.disable_ipv6 = 1
  net.ipv6.conf.<interface0>.disable_ipv6 = 1
  net.ipv6.conf.<interfaceN>.disable_ipv6 = 1
  vi /etc/hosts (comment IPv6 hosts)
L # vi /etc/sysconfig/network
  NETWORKING_IPV6=no
  IPV6INIT=no
  service network restart
L # vi /etc/modprobe.conf
  install ipv6 /bin/true (append to file)
L # vi /etc/modprobe.conf (RHEL/CentOS)
  alias net-pf-10 off
L # vi /etc/modprobe.conf (Debian/Ubuntu)
  alias net-pf-10 off
  alias ipv6 off
W # reg add hklm\system\currentcontrolset\services\
  tcpip6\parameters /v DisabledComponents /t
  REG_DWORD /d 255
```

★ Check network configuration

```
L # vi /etc/network/interfaces (Ubuntu)
L # vi /etc/sysconfig/network-scripts/ifcfg-eth*
  (RHEL)
```

Forensics

Processes

⋆ Inspect startup items

`L # initctl show-config` (upstart, Ubuntu)

`F # less /etc/rc.local` (deprecated)

`F # grep local_start /etc/defaults/rc.conf`

`W` Autoruns → Options → Filter Options ☑Verify code signatures ☑Hide Microsoft entries

⋆ Find SETUID and SETGID files and types

```
U # find / \( -perm -4000 -o -perm -2000 \)
  -exec file \{\} \;
```

```
U # crontab -e
  0 4 * * * find / \( -perm -4000 -o -perm
  -2000 \) -type f > /var/log/sidlog.new &&
  diff /var/log/sidlog.new /var/log/sidlog &&
  mv /var/log/sidlog.new /var/log/sidlog
```

⋆ Find world/group writeable directories

```
U # find / \( -perm -g+w -o -perm -o+w \)
  -type d -exec ls -ald \{\} \;
```

⋆ Find all unsigned processes

`W` ProcessExplorer Options → Verify Image Signatures

⋆ View Process File Location

`W` ProcessExplorer View → Select Columns... → Image Path

⋆ Display listening TCP/UDP ports

`LWU # netstat -tun`

`W` tcpview

```
B # netstat -p tcp -an | egrep
  'Proto|LISTEN|udp'
```

`U # lsof -nPi | awk '/LISTEN/'`

`F # sockstat -4 -l`

⋆ Check active connections to find backdoors

`U # lsof -nPi | awk '/ESTABLISHED/'`

⋆ Currently Running Tasks/Processes

`W # tasklist -svc`

`LU # ps aux | less`

`LU # top`

`LU # ps -u user`

⋆ Kill Tasks/Processes

`W # taskkill -pid pid`

`LU # kill pid`

Users

⋆ Inspect logged in and past users

`U # w`

`U # last | head`

`U # ps -ef | awk '$6 != "?"'` (interactive procs)

`W` PsLoggedOn

`W` Task Manager (open as administrator) -> Users Tab

`W # wmic computersystem get username`

`W # wmic /node:remotecomputer computersystem get username`

Cleanup

⋆ Kill all processes accessing a mount point

`U # fuser -k -c /mnt/secret`

Drivers

⋆ Driver query

`W # driverquery (-v)`

Databases

⋆ Export/Restore a MySQL Database

```
U # mysqldump -u username -p database_name >
  dump.sql
```

```
U # mysql -u username -p database_name <
  dump.sql
```

⋆ Export/Restore a PostgreSQL Database

`U # pg_dump database_name > dump.sql`

`U # psql -d database_name -f dump.sql`
